

# **Indiana Beekeeping School**

## ***Beginning Beekeeping***

**Friday 4-9pm & Saturday 7am-5pm January 11-12, 2019**  
**Hendricks Regional YMCA, Avon IN**

**Sunday Field Day 2-5pm date TBA April or May, 2019**  
**Bluffwood Creek Farm & Apiary, Pittsboro, Indiana**

*With the decline in natural population of honeybees due to disease and pests, we find ourselves almost completely dependent on beekeepers to provide a healthy bee population to continue the critical role of pollination on farms and in gardens.*

*Who can keep a beehive? Unless specifically forbidden by neighborhood covenants, most city, town and rural residents can keep a beehive without restriction. Location is important, and keeping it out of sight from the neighbors can be advisable. Avoid being a "pest." A call to your town offices can confirm if there are restrictions in your area.*

*Participants in this course will pay a basic tuition fee and an optional materials fee. During the class, a standard Langstroth beehive will be constructed by those who have purchased the materials, and taken home for painting or staining. Seminars will cover basic beekeeping, biology of the honeybee egg/larva/adult, hive setup and location, plants that attract honeybees, feeding of honeybees, recognizing laying patterns, swarm prediction, prevention and retrieval, spring, summer and fall management, honey removal and processing, and disease and pest management. A certificate for a nucleus of bees and a queen can be bought at the class, which will arrive in May or early June.*

**Seminar leader & presenter: Rob Green, principal: Indiana Beekeeping School, inc.**

**Presenters & Workshop Leader: Kathleen Prough, Indiana Dept of Natural Resources.**

*The class is run by the Indiana Beekeeping School, Inc, a not-for-profit 501(c)(3) educational foundation, who is solely responsible for its content. Hendricks Regional Health and the YMCA provide facilities only and are not responsible for course content.*

## **Indiana Beekeeping School, Inc.**

## NOTE:

Materials are NOT included in the tuition costs.

The Indiana Beekeeping School has a vendor who will sell direct to you, starter kits and beehives, and bees. Hardware will be delivered directly to the class. Bees will be picked up by you in a central Indiana location in the spring. Prices on bees should be available by the time the class is run, but expect approximately \$150 or more per colony.

You are NOT obligated to purchase from this vendor. However other equipment vendors are not necessarily going to sell you what we recommend. For example, we recommend pure beeswax foundation, not plastic. We recommend an IPM screened bottom board. If you come to class with unapproved kits, you will have difficulty in class. During the workshops we can only assist those with approved kits.

Our vendor delivers materials to the class locations because no vendor will ship beeswax foundation during cold weather. We do NOT recommend plastic foundation.

Our bee vendors are certified healthy and free of small hive beetle. Other vendors NOT certified.

You need to contact the vendor directly. Other supplies are available. You may custom modify this kit.  
317-432-8570 OR 812-597-2000.

Official vendor for the Indiana Beekeeping School is Graham's Bee Works, Morgantown IN
